SUMMARY

Results-driven professional with 6 years of experience in IT. While I am a technological professional with master's degree in the field of Cyber Security from Wright State University in OHIO USA, I excel and have profound knowledge in the field of Automation Testing using Selenium/Python/Java Technology. I have executed several automation projects on both On-premise/Cloud and on multiple environments.

EDUCATION

- M.S (Cyber Security) from Wright State University, USA - <2017>
- B.E (IT) from JNT University, Hyderabad - <2011>

PERSONAL DETAILS

- **Languages:**
English, Hindi, Tamil and Telugu
- **Passport Number:**
M0961464

EXPERIENCE

February 5th 2020 – April 22nd 2021

Senior Software QA Engineer • Msys Technologies

Nov 19th 2018- January 27th 2020

Senior Software Engineer • Hexaware Technologies

June 27th 2011 – April 27th 2015

Software Engineer • Wipro Limited

TECHNOLOGY KNOW-HOW

- Operating Systems: MS-Windows 2000/XP/7, Linux (Ubuntu)
- Tools: Net beans IDE, Eclipse, and Microsoft Visual Studio
- Packages: MS-Office with proficiency in Ms-Excel, Ms-Outlook
- Cyber security tools: Wireshark, WinDbg, OllyDbg
- Languages: Java, C, C++, Python
- Automation Testing Tool: Selenium with Python and Java

ACHIEVEMENTS

- Passed in State Level Science Talent Search Examination held on 2001
- Participated in Mission Possible event of ADASTRA; a Techno-Management-Cultural-Literary fest during undergraduate course
- Volunteer for ROBOVEDA – a National Level Exclusive Robotics Symposium during undergraduate course.

SUDARSHAN GOVINDARAJAN

AUTOMATION TEST SENIOR ENGINEER

Project	Arc serve
Role	Senior Quality Assurance Engineer
Client	Arc serve
Environment	Manual Testing
Responsibilities	As a test engineer my responsibilities are as under: Trigger the task scheduler for the installation of the build Triage in case of installation failure Trigger the utility start.bat file in case for the display on the portal Triage in case if the on the portal is a failure. Installation of the build on the Linux

Project	CASL - Cached Accelerated Sequential Layout
Role	Senior Quality Assurance Engineer
Client	HPE and Nimble
Environment	Automation Testing
Responsibilities	As an automation test engineer my responsibilities are as under: - Modified the Test Scripts using the python language for Bug fixing - Execution of the test cases and generation of the logs - Analyzing the logs to find the failures and fixing the logs in case of improper fix Code Push - Mercurial and Phabricator - Cloning the code from the Mercurial repository to the local repository - Using the Mercurial commands in Linux for pushing the code for the code review.

SUDARSHAN GOVINDARAJAN

AUTOMATION TEST SENIOR ENGINEER

Project	Daimler Trucks Asia - Quality Management
Role	Senior Software Engineer
Client	Japanese FUSO
Environment	Manual Testing
Responsibilities	Responsible for the testing of the maps which is migrated from the Google to the leaflets Responsible for the testing of Multiple webpages manually (DTC Reports) Generically 1. Prepare Test data, test scenarios, and test cases 2. Create Test cases and Test Scenarios for the functional requirements 3. Expertise in Functional, Regression and Smoke Testing

Project	Artificial Intelligence Lab
Role	Senior Software Engineer
Client	Ernst and Young
Environment	Automation Testing
Responsibilities	As an automation test engineer my responsibilities are as under: • Developed the Test Scripts with the WEBIUM driver using the python language • Usage of the Page Object Model • Creation of the fixture which can be used by the test scripts • Execution of the test cases using the PYTEST framework • Usage of the XPath and CSS Selector Code Push - Git Lab, GITGUI and Win merge • Cloning the code from the Git lab repository to the local repository • Using the Git GUI for pushing the code to the branch • Using the Win merge tool to avoid the merge conflicts • Raising the merge request or pull request to push the code to the master branch CI\CD Tool- Azure Pipeline • Executing the both regression suite and the smoke suite using the Azure Pipeline

AUTOMATION TEST SENIOR ENGINEER

Project	Pre and Post Migration
Role	Administrator–L1 Device Migration
Client	Citibank
Environment	NETWORKING, CCNA
Responsibilities	• The first thing is to determine is the list of devices that will be migrated and how they should be organized and configured mostly and managed centrally. • The devices should be organized into Device Groups and have the same or similar security policy, should be put into the same Device Group. The policy will be built up for the Device Group and pushed to all devices in that Device Group. • The final step in the Pre-Migration is to develop a test plan. The test plan is critical to ensure that the devices are functioning with a pushed configuration • Once the migration has been completed, the last step is to monitor the devices for at least 24 hours to verify that they are still operating as expected. Reviewing the traffic logs for any anomalies, such as sessions that are denied.

Project	Identity and Access Management
Role	Administrator–L1
Client	Sealed air
Environment	OIM 11, Windows Server 2003
Responsibilities	• Maintaining /Administering the Access Privileges/Identities of all the corporate users , controlling the access levels to various applications suited for their role, through the automated Provisioning system called Oracle Identity Management • Troubleshooting for authentication, account lockout and login issues related to Windows, VPN, Email and other SSO applications- (like Concur, vpn, i.diversey(login website),Google(email), People soft(HRIS)). • Assisting my team lead in the preparation/Review of EPD/SMTD, Incident /Problem and Change Management related documents.
